

Release Notes

Update: v1.0.1

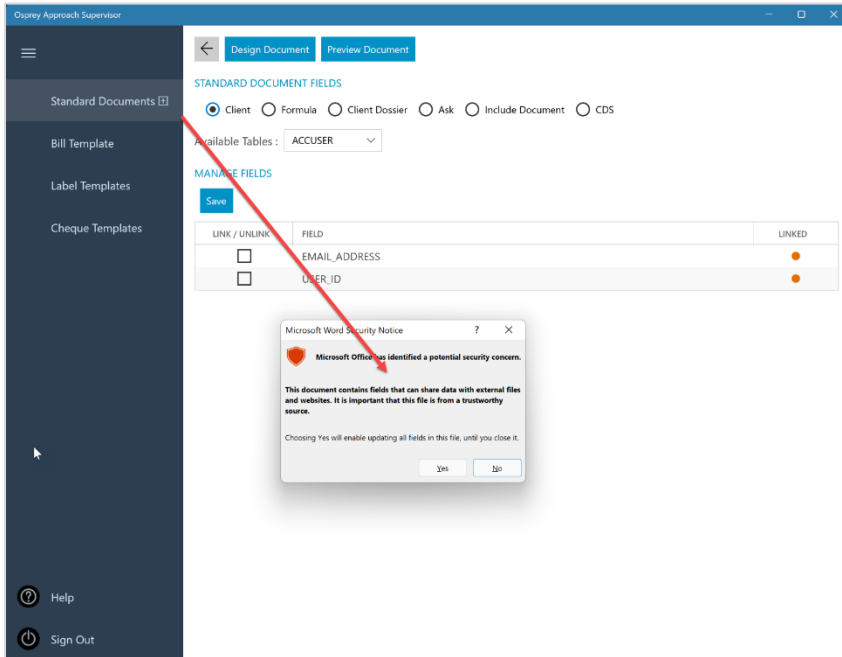

Supervisor App

Contents

Security warning when editing docs	3
Associates – web-enabled documents	4

Security warning when editing docs

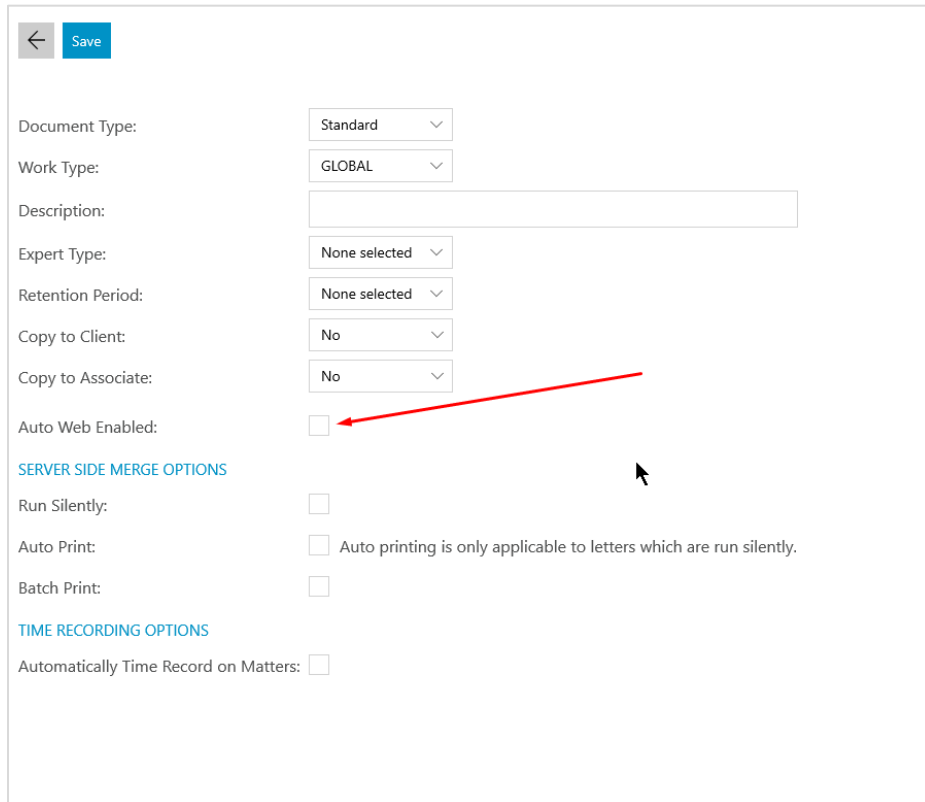

Previously, when users tried to open a document to edit, the document would not open without them accepting the security warning.

In this update this has been fixed so no warning message will appear.

Associates – web-enabled documents

Previously, when documents were web-enabled - for the client to view on the web portal - it would automatically web-enable them for the associate as well.
