Update: v1.0.7

Web Portal

Contents

Check in/Check out in Web Portal	3
Publishing attachments uploaded from Outlook add-in to Web Portal	3

Check in / Check out in Web Portal

This update has fixed various issues relating to checking in and checking out documents in the deal room. Creating and checking out documents can now be completed in the browser without issues.

Publishing attachments uploaded from the Outlook add-in to the Web Portal

Previously, if a file attached to an email was imported to Osprey, using the Outlook add-in, and was web enabled it would not appear in the web portal for the client to see. This update fixes that issue, so any file attached to an email can now be web enabled successfully.
