You can create signatures on Osprey that are included on emails sent from the Osprey case management system.

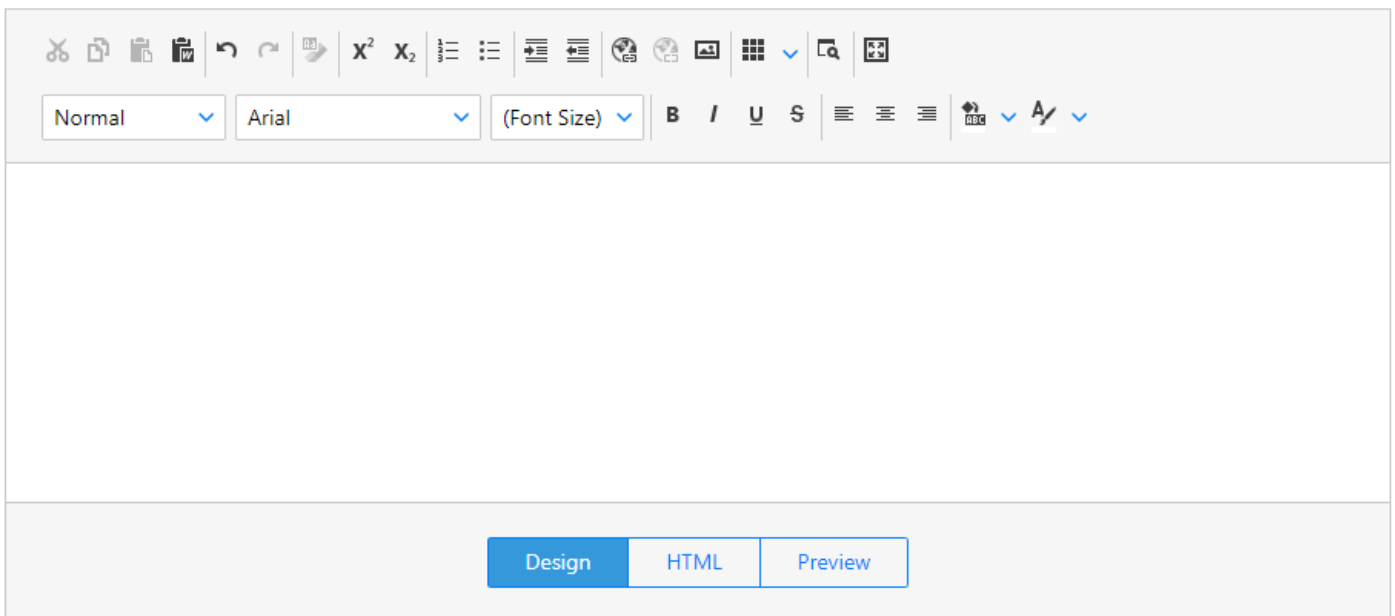

There are multiple ways email signatures being created:

- System Signature
- Branch Signature
- Individual User Signatures

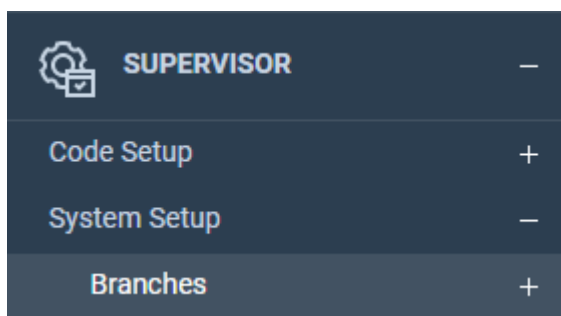

Any of these can be set as default. In addition, variations can be made for individual users over and above the defaults so the whole firm could be set to use branch signatures, but a number of individual users could have options to select their own signatures at the time of emailing.

The System Signature is set at the bottom of the System Settings screen from the Supervisor menu. In System Setup, you also set the defaults for signature behaviour, which will allow you to use System Signature, use Branch Signature or allow the user to select the signature.

EMAIL SIGNATURE

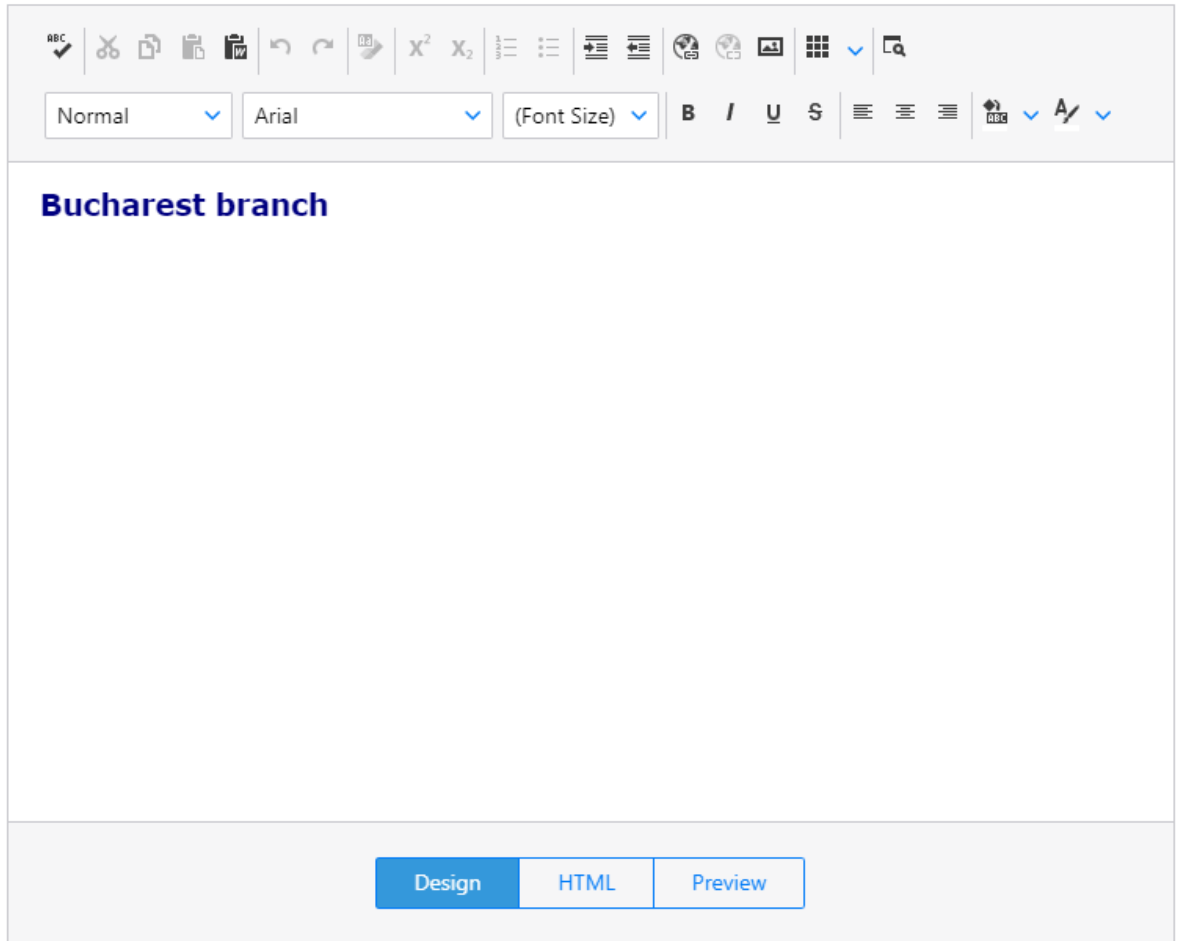

The Branch Signature is set in the 'Edit Branch' area found by navigating to the 'Supervisor' area, then selecting 'System Setup' and then 'Branches'. Right click and select 'Edit' on the relevant branch.

At the bottom of the 'Edit' screen there the option to put a branch signature in.

Email signature:

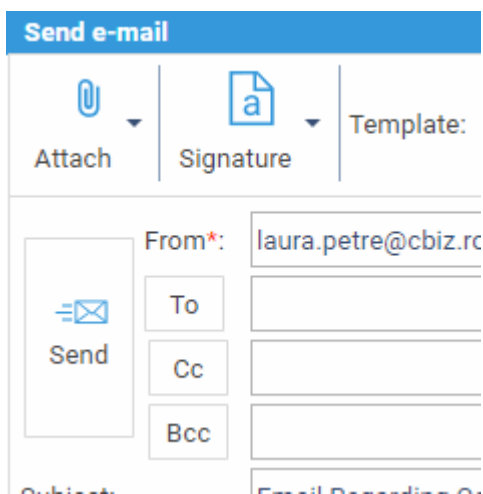

The User Signature can be set from System Setup > Users and Edit the relevant user to enable them to select the signature.

Email signature
behaviour:

- Inherit from system Use branch signature Allow user to select the signature

The user can then set up their own signature from within the Send Email screen in Case Management.

Select Signature and then Signatures

The signature can then be managed from the resulting screen.
